

Nguyen Thi Phuong

📍 Hanoi, Vietnam ✉️ phuongnguyen.tmm@gmail.com 🏠 1997

Skills

- Manual testing: exploratory, regression, smoke, user acceptance, cross-browser
- Test case design, test planning, and execution
- Automation testing with Java, Selenium, and Playwright
- API testing using Postman and Charles
- Database validation with SQL (MySQL, PostgreSQL)
- Requirements analysis and documentation
- Functional and performance testing
- Version control with Git; scripting in JavaScript and TypeScript; BDD methodology

Fundamental Knowledge

ETL Concepts & Data Processing

- **Data Extraction:** Understanding various data sources (databases, APIs, flat files, web services) and extraction methods including full load, incremental load, and change data capture (CDC)
- **Data Transformation:** Proficient in data cleaning, validation, standardization, aggregation, and business rule application; handling data type conversions and complex transformations
- **Data Loading:** Knowledge of loading strategies including bulk loading, batch processing, and real-time streaming; understanding of staging areas and target system optimization
- **Real-time vs. Batch Processing:** Experience with both streaming data pipelines for real-time analytics and scheduled batch processing for large-scale data operations

Data Quality Assurance & Validation

- **Data Validation Techniques:** Implementing completeness checks, accuracy validation, consistency verification, and referential integrity testing across data pipelines
- **Root Cause Analysis:** Systematic approach to identifying data quality issues, tracing data lineage, and implementing corrective measures for data discrepancies
- **Source-Target Reconciliation:** Expertise in comparing data between source and target systems, validating row counts, sum checks, and ensuring data integrity throughout the ETL process
- **Data Profiling:** Analyzing data patterns, identifying anomalies, and establishing data quality metrics for continuous monitoring

Data Architecture & Banking Integration

- **Data Warehouse Architecture:** Understanding of dimensional modeling, star/snowflake schemas, fact and dimension tables, and OLAP vs. OLTP systems
- **Data Lakes vs. Data Warehouses:** Knowledge of architectural differences, use cases, and when to apply each approach; understanding of data lake zones (raw, processed, curated)
- **Banking Integration Patterns:** Familiarity with financial data requirements, regulatory compliance (Basel III, GDPR), real-time fraud detection, and risk management data flows
- **Hybrid Architecture:** Understanding of lambda and kappa architectures for combining batch and stream processing in banking environments

Education

BSc **VNU University of Engineering and Technology**, Information System

2016 – 2020

Awards

- 2019: Incentive scholarship for excellent students

Experience

OpenCommerce Group, Quality Assurance Automation Engineer

Hanoi, Vietnam
Jan 2022 – Jul 2023

- Planned, built, and executed automation tests using both Playwright and Selenium frameworks.
- Developed and maintained automated test scripts in JavaScript, TypeScript, and Java.
- Applied Behavior-Driven Development (BDD) practices for test scenarios.
- Utilized Git for version control and collaboration.

Skills: Git, JavaScript, Java, TypeScript, BDD

Eglife JSC, Tester

Hanoi, Vietnam
Jul 2021 – Dec 2021

- Gathered requirements from stakeholders and created business requirement documents.
- Wrote test cases, test scenarios, and scripts for automation testing.
- Developed automation tests using Java and Selenium.
- Debugged APIs with Charles and tested APIs on Postman.
- Projects:
 - **Customdat (E-commerce):** Worked with Spanish clients, created checklists, test cases, and planned tests.
 - **HanquocNori (Education Website):** Created test scenarios and performed integration testing.

DAC Data Science Vietnam, Quality Control

Hanoi, Vietnam
Oct 2019 – Apr 2021

- Managed the full test process: planning, development, execution, and reporting.
- Designed and executed functional and performance test cases.
- Wrote SQL queries to validate data in MySQL.
- Reported results and wrote product requirement documents.
- Projects:
 - **Delivery ON/OFF:** Automated ad scheduling.
 - **T&D Creation Tool:** Validated ad content, suggested improvements, and tested new features.
 - **Report:** Automated delivery reports, validated data with SQL and Tableau.
 - **TrueView & Adword:** Set up metrics for Google ads, executed API tests, and checked logs on Google Cloud.
 - **Shinsa & Shinsa Alert:** Performed reporting and notification tests.
