

Long Nguyen Van

📍 Ha Noi, Vietnam ✉ vnlonguet@gmail.com ☎ +84 357 448 487 🌐 github.com/nvlong198

Skills

- Programming Languages: Python, Java, Scala, JavaScript
- Data Engineering: Apache Spark, Kafka, Airflow, dbt, Hadoop HDFS
- Cloud Platforms: AWS (Glue, Lambda, Redshift, Kinesis, DMS)
- Databases: MySQL, PostgreSQL, MongoDB, Elasticsearch, Amazon Redshift
- Data Pipeline Tools: Kafka Connector, Debezium, Spark Streaming
- BI Tools: Superset, Redash, Holistics, Power BI, Tableau
- Web Development: Flask, Spring Boot, ReactJS
- Machine Learning: NLP, LSTM, Statistical Language Modeling
- Version Control: Git

Education

- BSc** **VNU University of Engineering and Technology**, Information Systems (GPA: 3.22/4.0) 2016 – 2020
- Achievement certificate for very good student in academic year 2018-2019
 - Thesis: Automatic Diacritic Restoration of Vietnamese Language Text (99% accuracy)
 - Research experience at university laboratory

Languages

- English: TOEIC 640 (2020)
- Japanese: JLPT N4 (2018)

Experience

- Techcom Securities JSC**, Senior Data Engineer Ha Noi, Vietnam
Oct 2022 – Present
- Lead a team of 5 engineers in designing and implementing scalable data pipelines
 - Collect and integrate data from various sources (API, Elasticsearch, MongoDB, MySQL, PostgreSQL)
 - Designed data pipelines using AWS Glue, Kafka Connector, AWS Lambda, and AWS Redshift
 - Developed and deployed web crawlers using Scrapy and Selenium
 - Optimized data quality, performance, and reliability applying best practices
 - Enhanced data security and compliance through encryption, authentication, and authorization
 - Collaborated with data analysts and scientists on business requirements
- OpenCommerce Group**, Data Engineer Ha Noi, Vietnam
Dec 2021 – Oct 2022
- Designed data marts and optimized queries in a 3-person team
 - Built and maintained data pipelines using Airflow and dbt
 - Migrated legacy databases to Amazon Redshift
 - Implemented data models and validated data quality using dbt
 - Integrated data from various sources using webhook and crawling methods

- Optimized database performance and managed workloads
- Worked with BI tools: Holistics, Power BI, Tableau

Tech Stack: Python, Airflow, dbt, Redshift, PostgreSQL, AWS, Docker, Kinesis-Firehose

Giaohangtietkiem JSC, Data Engineer

Ha Noi, Vietnam
Aug 2019 – Nov 2021

- Worked in an 8-person team on database design, coding, and web development
- Built Kafka connectors to capture database binary log events
- Developed ingestion pipelines using Spark Streaming from Kafka to HDFS
- Created ETL pipelines aggregating data from Hadoop HDFS to MySQL/MongoDB
- Installed and integrated Superset BI tools with OAuth authentication
- Built AI systems for product classification and user trend analysis
- Developed full-stack applications for reporting management systems
- Handled Kafka and Spark streaming performance issues

Tech Stack: Java, Scala, Python, JavaScript, Hadoop, Spark, Kafka, Flask, Spring Boot, ReactJS

NERD JSC, NLP Researcher Intern

Ha Noi, Vietnam
Aug 2018 – Aug 2019

- Improved natural language understanding for intent detection
- Created bot crawlers for machine learning model training data collection
- Worked on NLP tasks: Named Entity Recognition and Diacritic Restoration in Vietnamese

Key Projects

WarehouseGen2 - OpenCommerce Group

Jan 2022 – Present
Team: 3

- Built data warehouse using Amazon Redshift with multi-source data collection
- Developed pipelines for external data collection via API, crawlers, and Kinesis Firehose
- Self-built and managed Airflow for orchestration
- Implemented data transformation and testing using dbt
- Managed AWS DMS for database synchronization (PostgreSQL, MySQL to Redshift)

Technologies: Airflow, Kinesis Firehose, dbt, Amazon Redshift

Data as Services (das.ghatk.vn) - Giaohangtietkiem JSC

Aug 2019 – Nov 2021
Team: 2

- Built query builder application for non-technical users to create reports
- Implemented role-based access control and user management
- Enabled scheduled report delivery in XLSX/PDF format via email/chat
- Reduced 80% of requests to Data Analyst team, serving hundreds of users
- Full-stack development with database design and requirements gathering

Technologies: Flask (Python), ReactJS, Spring Boot (Java), MySQL, Elasticsearch
