WORK EXPERIENCE

Techcom Securities JSC

Senior Data Engineer

Ha Noi

Oct 2022 - Present

- Team size: 5
- **Key activities:**
 - Collect/Crawl/webhook integration data from various sources to the Data warehouse (API, Elastic Search, MongoDB, MySQL, PostgreSQL, crawler...)
 - Designed and implemented scalable data pipelines using AWS Glue, Kafka Connector, AWS Lambda, and AWS Redshift
 - Developed and deployed web crawlers using Scrapy and Selenium
 - Optimized data quality, performance, and reliability by applying best practices
 - Collaborated with data analysts and scientists to understand business requirements
 - Enhanced data security and compliance by implementing encryption, authentication, and authorization mechanisms

OpenCommerce Group

Data Engineer

Ha Noi

Dec 2021 - Oct 2022

- Duties: Design data mart, Coding, Optimize queries / Team size: 3
- Language: Python
- Technical Stack: Airflow, dbt, Redshift, PostgreSQL, AWS, Docker, Kinesis - Firehose
- BI tools: Holistics, Power BI, Tableau
- **Key activities:**
 - Collect/Crawl/webhook integration data from various sources to the Data warehouse
 - Migrate the legacy database to Amazon Redshift
 - Build/Maintain data pipeline service (airflow)
 - Experienced building data models and validating essential data quality using "data build tool"
 - Troubleshoot BI tool issues, enhancing dashboard and database performance
 - Optimize database performance, alert and manage database workloads

Giaohangtietkiem JSC

Data Engineer

Ha Noi

Aug 2019 - Nov 2021

- Duties: Coding, Optimize queries, Design database, web development / Team size: 8
- Language: Java, Scala, Python, JavaScript
- Technical Stack: Hadoop, Spark, Airflow, MySQL, Kafka, Flask, SpringBoot framework, ReactJS
- BI tools: Superset, Redash
- **Key activities:**
 - Building Kafka connector to capture events from database binary log and stream into Kafka topic
 - Developed ingestion pipeline to capture data change from Kafka topic to HDFS data lakes by Spark Streaming
 - Developed ETL pipelines to aggregate data from Hadoop HDFS to MySQL, and MongoDB using Apache Spark and Cloudera Impala
 - Install open source Superset BI Tools for visualization analysis purposes & integrate Superset

- with existing OAuth authentication
- Refactoring and optimizing SQL slow queries
- Handle Kafka, spark streaming problems
- Developed application to detect table schema changes
- Building AI-based systems to classify product names, and help the business analyze user trends
- Worked full-stack development, Digital transformation for reporting management systems

NERD JSC

Ha Noi

NLP Researcher Intern

Aug 2018 – Aug 2019

- Improve natural language understanding for intent detection
- Created a bot crawler to collect data for training machine learning models
- Worked on Natural Language Processing (NLP) tasks such as Name Entity Recognition, and Diacritic Restoration in Vietnamese

EDUCATION

VNU University of Engineering and Technology

Ha Noi

Information Systems GPA: 3.22/4.0

Graduation: June 2020

- Researcher at the laboratory
- Great level of self-studying
- Doing researches with teachers as supervisors
- Achievement certificate for the very good student in the academic year 2018-2019
- Thesis: Automatic Diacritic Restoration of Vietnamese Language Text, Result: 99% accuracy, by combining LSTM and statistical language modeling

LANGUAGES

English

TOEIC 640 - 2020

Japanese

JLPT N4 - 2018

THE MAIN PROJECTS

WarehouseGen2 (Jan 2022 - Present).....

Customer: OpenCommerce Group

Description: Build a data warehouse using Redshift. Build pipelines to collect data from many sources and transform data correctly.

Project size: 3

My position: Data Engineer

My responsibilities:

- Build pipeline that collects external data using API and crawler, and by Kinesis Firehose
- Self-build & manage Airflow
- Build pipeline transform, and test data using dbt
- Management AWS DMS to sync data from another database (Postgres, MySQL) to Redshift

Technologies used: Airflow, Firehose, dbt, Redshift

Warehouse Statistics (2021 - Nov 2021).....

Customer: Giaohangtietkiem JSC

Description: Create statistical data for shop users in fulfillment services

Project size: 1

My position: Data Engineer

My responsibilities: Build transformation query in spark and put the results into MongoDB

Technologies used: Spark (Scala), Metorikku

Sync2Elastic (Aug 2019 - Nov 2021).....

Customer: Giaohangtietkiem JSC

Description: Synchronization table data change from MySQL to Elasticsearch for searching purpose

Project size: 2

My position: Data Engineer

My responsibilities: Build data pipeline from kafka to Elasticsearch

Technologies used: Spark (Scala), Kafka

Data Ingestion (Aug 2019 - Nov 2021).....

Customer: Giaohangtietkiem JSC

Description: Ingestion data from various source databases (MongoDB, MySQL, PostgreSQL...) to Data Warehouse (HDFS) in parquet format

Project size: 3

My position: Data Engineer

My responsibilities: Build and maintain 3 components' data pipeline: Kafka connector, Kafka and Spark Streaming

Technologies used: Spark (Scala), Kafka, Debezium

User Tracking (Feb 2020).....

Customer: Giaohangtietkiem JSC

Description: Tracking user events from web or mobile application

Project size: 2

My position: Data Engineer

My responsibilities: Maintain and develop an embed script to collect data from user events in web application

Technologies used: Javascript

Data as Services | das.ghtk.vn (Aug 2019 - Nov 2021).....

Customer: Giaohangtietkiem JSC

Description: This app (queries builder) allows users to write a native query, others can base on that custom query with additional user defined values, text, time,...etc. After that people can receive query results on a scheduled time or immediately in xlsx or pdf format to email or chat channels. With main features like manage report, user, and role-based access control security.

Impact: Help hundreds of non-tech create reports without knowing SQL, reduce 80% of requests to the Data Analyst team

Project size: 2

My position: Data Engineer

My responsibilities:

- Gather users requirements and design database
- Main developer for frontend and backend

Technologies used: Flask (Python), ReactJS (ES6), Spring Boot (Java), MySQL, ElasticSearch
